SUBCELLULAR LOCATION: Membrane-associated.
TISSUE SPECIFICITY: Highly expressed in skeletal muscle, test adrenal gland and thymus, followed by pancreas, liver, heart thymus. Weakly expressed in kidney, placenta, brain and lung. MISCELLANEOUS: Optimum pH is 3.8.
SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDROLASES.
SIMILARITY: CONTAINS 3 BNR REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             glycoconjugates.

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal stalic residues in alpha-(2->8)-glycoproteins, glycolipids, colominic acid and oligosaccharides, glycoproteins, glycolipids, colominic acid and

SUBCELLULAR LOCATION: Membrane-associated
TISSUE SPECIFICITY: Expressed in brain.
SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOS
SIMILARITY: CONTAINS 3 BNR REPEATS.
                                                                                                                                                                                              glycoconjugates.
CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-,
alpha-(2->8)-glycosidic linkages of terminal sia.
oligosaccharides, glycoproteins, glycolipids, co
